

Preparing for Automated future

Moving from digital to robotics is happening, but we don't know how soon that will be. Machines will replace people's jobs, or how many people will be able to secure such jobs?

It is not only factory workers that will be affected also managers from different fields and retail workers.

- Skills should be taught in Formal education.
- People should adjust to on-going changes in work life.
- Special skills for a particular job should be learnt.

New traits that machines cannot easily replicate

- **Creativity**
- **Critical thinking**
- **Emotional Intelligence**
- **Adaptability**
- **Collaboration**

Horizontal axis of capabilities and vertical axis of specialisation

X-axis: The degree of rational and logical thinking

Y-axis: The degree of single emotion or feeling (anger, joy, love etc.(weak to strong emotional feelings)

Z-axis: The degree of consciousness (from non-conscious to conscious.

Preparations as a job seeker

- New skills(on job, take classes, teach yourself)
- Build and Repair mentality
- Research and evaluate
- Teach and care give
- Learn technological skills that will create jobs for the future.
- Multiskilling to enable yourself to work independent in different environments.
